

Kolitha Indrachapa Thuduhena

Founder & Director, RugenX

Kolitha is a dedicated electromechanical engineer, entrepreneur, and practical problem-solver with a strong foundation in engineering design and applied innovation. A graduate of the Faculty of Technology, University of Ruhuna, he founded RugenX with a vision to channel technical expertise into practical, real-world engineering solutions. Alongside leading RugenX, he actively manages and scales several independent business ventures, reflecting his broad entrepreneurial acumen.

His technical proficiency spans 3D CAD modeling, system programming, and fault diagnosis, skills he has applied extensively across various industrial and engineering projects. His professional experience includes work with Diesel & Motor Engineering PLC (DIMO), where he contributed to the assembly and installation planning of a Fertilizer Blending Machine and was widely recognized for his strong interpersonal and people-management abilities. He also brings a solid background in advanced research, including the development of a Digital Twin system for condition monitoring in heavy machinery.

Kolitha is a proven leader and business operator, with strong organizational and team-leadership capabilities that underpin his role as Founder and Director of RugenX and as a multi-venture entrepreneur. Backed by specialized certifications from the Ceylon German Technical Training Institute, Kolitha combines a rigorous formal engineering education with natural leadership and a hands-on business mindset, driving RugenX's vision and growth forward.

Mr. Harshana Laknath Subasinghe

Co-Founder & Director, RugenX

Mr. Harshana Laknath Subasinghe is a mechanical engineer, entrepreneur, and practical problem solver with over nine years of experience in engineering design, industrial consulting, and research. As Co-Founder and Director of RugenX, he specializes in transforming complex engineering challenges into reliable, cost-effective solutions, applying his expertise in 3D CAD/CAM modeling, rapid prototyping, and FEA and CFD simulations to test and refine industrial designs.

His consulting experience is centered on practical, high-impact applications, including PLC programming for smart automated systems and technical analysis for large-scale projects such as water treatment plants and commercial greenhouse ventilation systems. At RugenX, he oversees daily operations, financial planning, and team coordination, bringing a disciplined and results-driven approach to the company's engineering and business functions.

Mr. Subasinghe's leadership foundation was established early, having served as Mechanical Coordinator for an EV Development Center, and prior to that as a Committee Member and later President of the Mechanical and Manufacturing Engineering Students' Society during his undergraduate studies.

He holds a B.Sc. in Mechanical and Manufacturing Engineering with First Class Honours, along with a Best Student Award for Engineering Design. A dedicated mentor and experienced university educator, Mr. Subasinghe has supervised over 30 engineering design projects, drawing on his background in research and curriculum development to nurture the next generation of practical engineers. By combining deep technical expertise with hands-on leadership, he plays a central role in delivering RugenX's engineering solutions while empowering emerging talent in the field.
